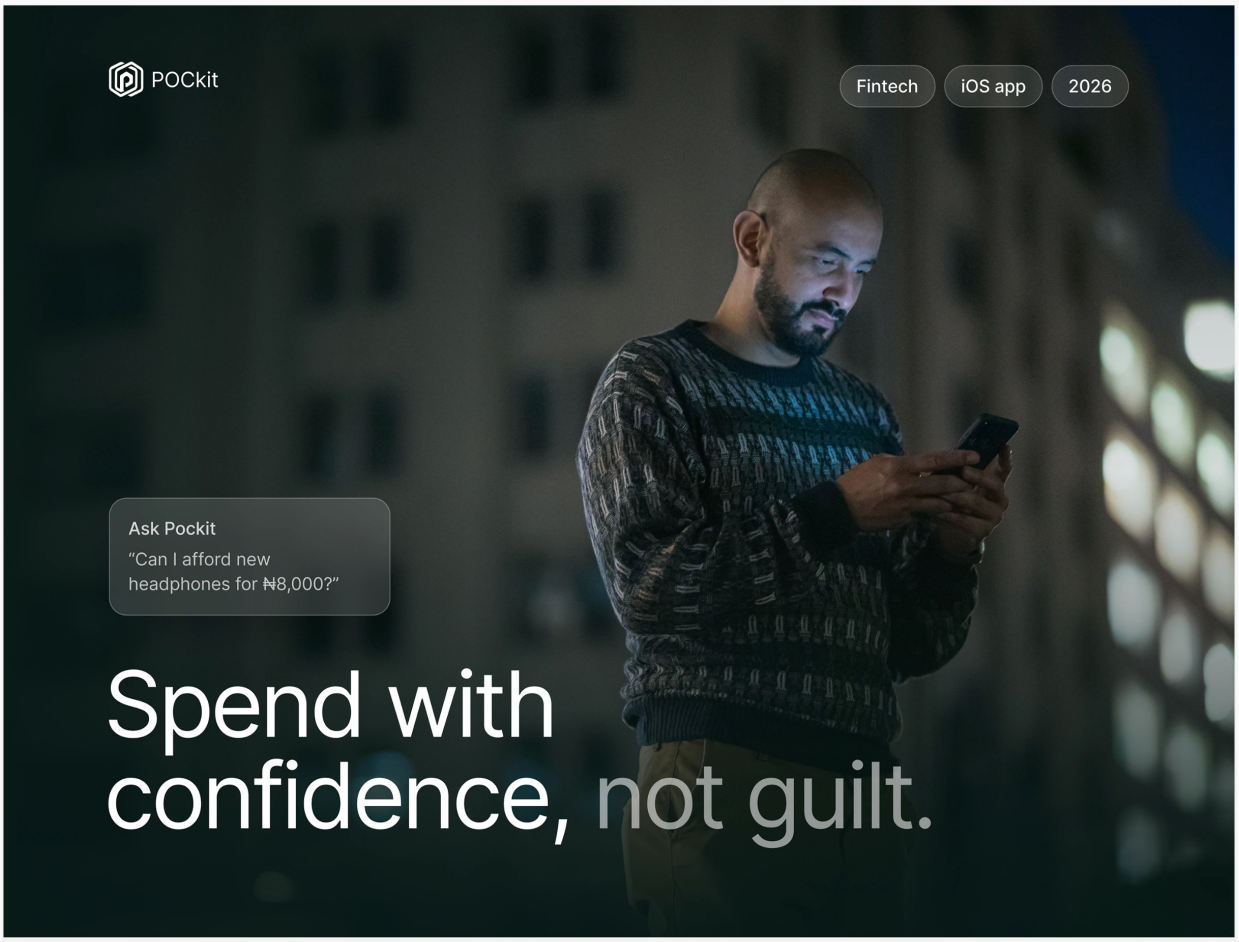
Pockit: AI Budgetting Assistant
Multiple Owners • Follow All



Introduction
01 / 15

Pockit is an AI budgeting app for students, young workers and freelancers. It helps people decide what they can spend before they spend it, through a calm coach they can simply talk to.

4 of 5 set up a first budget without help	**4 of 5** found their safe spend for the day	**5 of 5** logged an expense by voice

In 5 moderated usability sessions, 2026

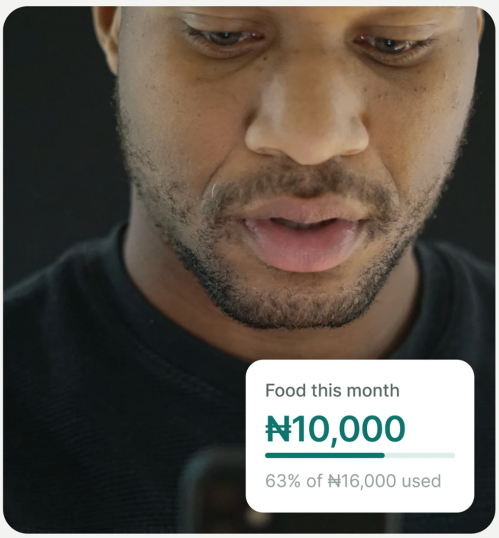
Timeline	4 weeks
Platform	iOS mobile app
Role	Product Designer
Scope	Research, UX, UI, prototype, testing

The problem

02 / 15

People have the data. They lack the guidance.

Most budgeting tools only record what already happened. Very few help people decide what to do next, so budgeting ends up feeling like a report card.



What app reviews said

"Budgeting apps feel made for accountants, not for people like me."

"too serious" "confusing" "overwhelming" "judgmental"

Paraphrased from app store reviews and finance community threads

What Pockit does instead

A coach, not a spreadsheet.

From Insight 01

Plain-language answers

The coach explains spending in simple words and always ends with a next step.

From Insight 02

Automatic tracking

Linked accounts sort every expense into a category, so nobody logs by hand.

From Insight 03

A calmer interface

Encouraging words, no red alarms, fewer charts to read.

From Insight 04

Fewer choices

Pockit drafts the first budget, so people only adjust it.

03 / 15

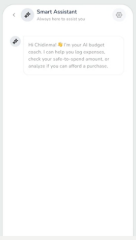
Process

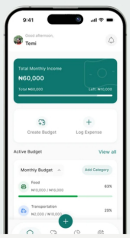
Four weeks. Every week, one decision.

I worked in four one-week phases. Each phase produced something concrete and closed with a

choice that shaped the next.

Reviews analysed
120





Set up a first budget
4 of 5
without help

Week 1
Research
Review analysis
Competitor audit
Personas

Decision
Focus on guidance before spending, not tracking after it.

Week 2
Ideation
User flows
Low-fidelity wireframes

Decision
Lead with a coach people can talk to, not a dashboard.

Week 3
Design
Style guide
Components
High-fidelity screens

Decision
Calm teal palette, fewer charts, plain words.

Week 4
Prototype and test
Interactive prototype
5 usability sessions
Iteration

Decision
Make bank linking optional and explain it first.

Research insights
04 / 15

Budgeting felt like punishment, not progress.

I analysed 120 app store reviews and finance community threads and audited leading budgeting apps. Four patterns kept coming back.

- 120 reviews and threads
- Competitor audit
- Community discussions

Insight 01 — 98 of 120

82%

found insights useful only with a plain explanation and a next step.

Most apps showed charts. Very few said what was happening or what to do.

→ Led to Decision 01

Insight 02 — 89 of 120

74%

preferred automatic categories and AI help over manual tracking.

Nobody wanted to tag every expense or set every limit by hand.

→ Led to Decision 02

Insight 03 — 82 of 120

68%

Insight 04 — 73 of 120

61%

linked budgeting with stress, guilt or anxiety.

People felt reminded of what they should not spend, not in control.

→ Led to Principle 01

called budgeting apps confusing or hard to keep up with.

"Too serious" and "made for accountants" came up again and again.

→ Led to Principle 03

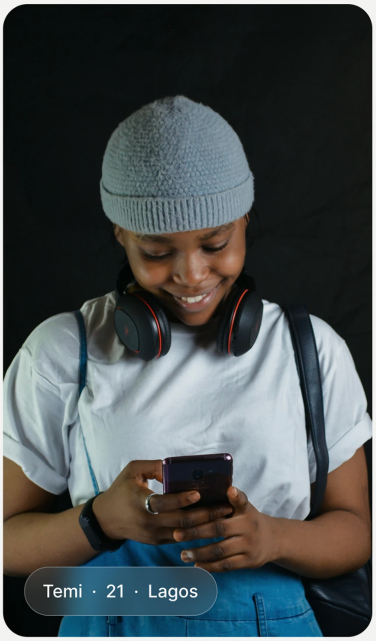
Source: analysis of 120 app store reviews and finance community threads, 2026

User personas

05 / 15

Three people, three money rhythms.

Built from the review analysis. Temi is the main persona, and every screen in this case study shows her month.



Main persona

"I know I should budget, but I hate feeling restricted. Just tell me if I can afford something before I spend it."

Role	Computer Science student, 3rd year
Income	₦45,000 to ₦60,000 a month, from allowance and freelance work

Goals

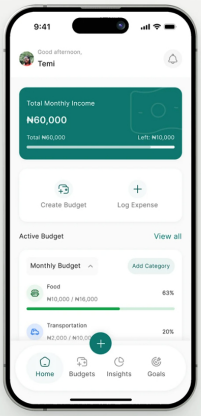
- Save for a new laptop
- Stop running out of money before month end

Pain points

- Impulse spending on food delivery
- Forgets to log expenses

How Pockit helps

A safe amount to spend each day, so she can decide before she pays.



Temi's month in Pockit

Chiamaka

29 · Freelance writer · Port Harcourt

₦150,000 to ₦350,000 a month, variable

"My income changes every month. I need a budget that adjusts with me, not one that punishes me for it."

How Pockit helps

Budgets drafted from real income each month, not a fixed number.

David

26 · Marketing executive · Abuja

₦250,000 a month, stable

"I make good money, but I do not know where it all goes. Keep me honest without making me feel bad."

How Pockit helps

Weekly insights in calm words, with no red alarms for overspending.

Product direction

06 / 15

From insight to structure.

The research became four principles. Every screen had to pass all four before it moved to high fidelity.

01

Reduce money anxiety

Calm colours and encouraging words. No red alarms for overspending.

From Insight 03

02

Cut manual effort

Linked accounts and AI drafts, so people only confirm.

From Insight 02

03

Explain in plain words

Every number comes with what it means and what to do next.

From Insights 01, 04

04

Reward consistency

Small wins stay visible, so the habit feels worth keeping.

From persona goals

User flow

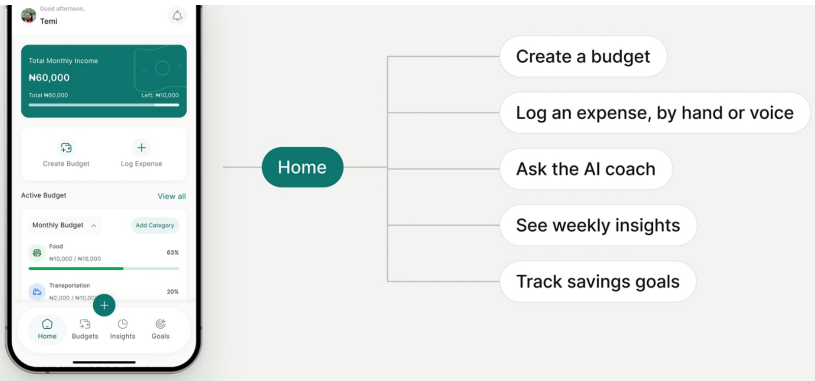
Two flows, one calm path.

Onboarding

Start	Income	Bank, optional	Ready
Splash	Add monthly income	Connect a bank	Bank insights
Get started		Select bank	Dashboard
Create account		Account details	
		Analysing	

Bank linking can be skipped. People can add income and budgets by hand instead.

Everyday use Home is the hub. Every everyday task starts there and returns there, so nobody gets lost.



Branding

07 / 15

Built for trust and calm.

A small, friendly identity: one teal, one typeface and a mark that keeps money safe.

POCkit

A “P” inside a pocket-shaped hexagon.

The pocket stands for safe keeping and the P for Pockit. Rounded corners keep it friendly, not clinical.

POCkit

On light

POCkit

On dark

POCkit

On teal

POCkit

Clear space

Keep half the mark’s height free on every side.

POCkit

Minimum size

24px high on screen, so the P stays readable.

Teal

#0F766E

Actions and brand

Ink

#000000

Text and icons

Grey

#8F8F8F

Secondary text

White

#FFFFFF

Surfaces

Aa

Inter

One typeface, from the logo to the smallest label. Clear numbers at every size.

Regular Medium **Semi Bold** **Bold**

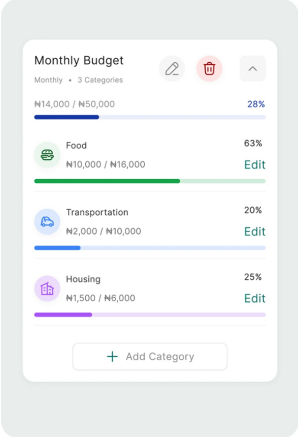
₦60,000 **₦1,200** **63%**

Design system

08 / 15

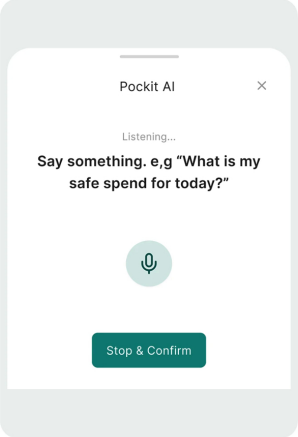
Six components carry the product.

The library holds every state, but these six do most of the work. Each is built with auto layout and variants.



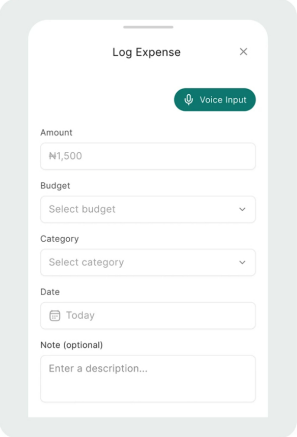
Budget card

Limit, spend and progress per category, with edit in place.



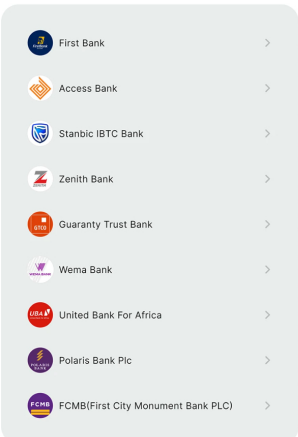
Voice input

Listening, processing and heard states for logging by voice.

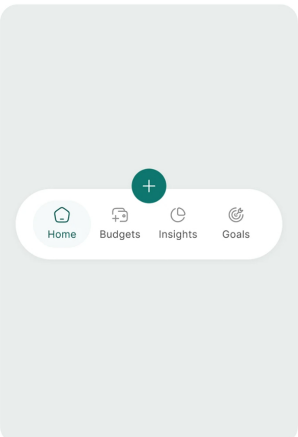


Log expense

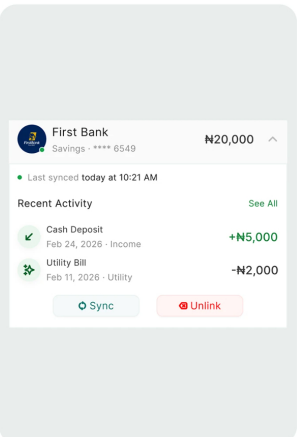
One form for amount, budget, category and a note.



Bank list



Navigation bar



Linked banks

Popular Nigerian banks with search, for fast linking.

Four tabs and a raised add button for quick logging.

Every connected account and its activity in one card.

Tokens

Colour

Radius

Spacing

Key decision 01

09 / 15

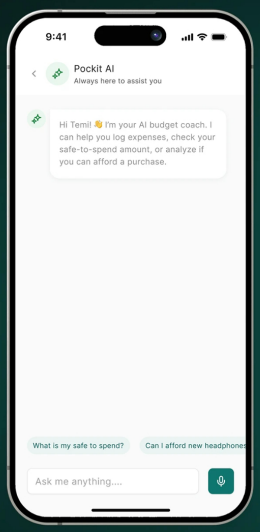
Answers, not charts.

Reviewers trusted numbers only when they came with a plain explanation and a next step. So the core of Pockit became a coach you can ask.

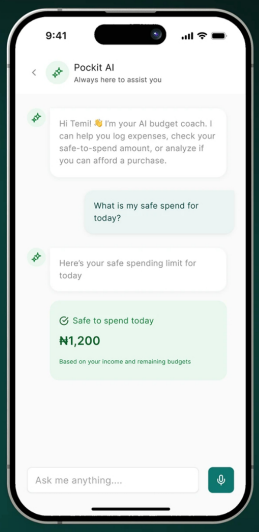
From Insight 01 · 82%

Temi asks

"What is my safe spend for today?"



1 Ask in your own words



2 Get one clear number

Safe to spend today

₦1,200

From income and budgets left

Option A

A dashboard of charts

Familiar and quick to build, but people still had to work out what the numbers meant.

Option B · Chosen

A coach you can ask

People ask "Can I afford this?" in their own words and get one clear number back.

Constraint

Four weeks, and every answer had to come from real income and budgets, never a guess.

Trade-off

Chat is slower for a quick glance, so Home also shows the safe-to-spend number without asking.

Outcome

In testing, 4 of 5 people found their safe spend for the day without help.

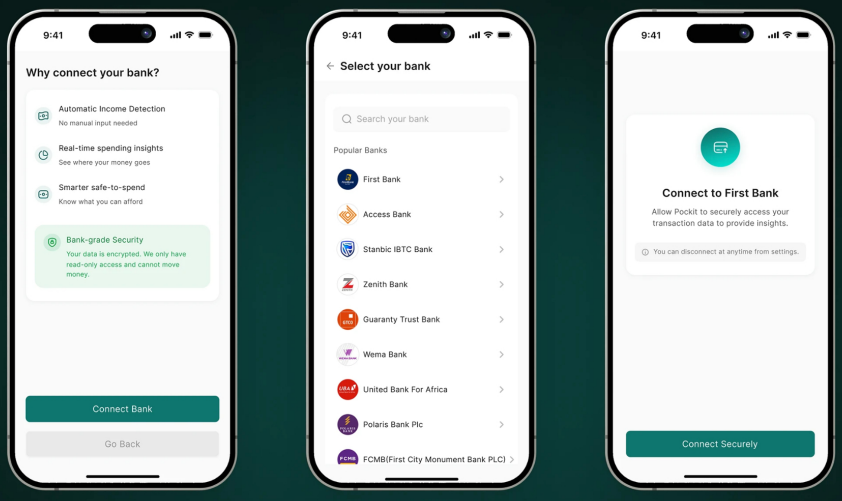
Key decision 02

10 / 15

Less logging, more living.

People like Temi forgot to log, so their budgets went stale within days. Linked accounts sort spending automatically, and voice covers cash.

From Insight 02 · 74%



• 1 Explain first • 2 Pick a bank • 3 Connect securely

Skip and add income by hand → always available

Option A

Manual logging only

Full control and no bank data, but people forget, and a budget with gaps stops being useful.

Option B · Chosen

Link a bank, log by voice when needed

Spending sorts itself into categories. Voice and manual logging cover cash and anything missed.

Constraint

Some people will not share bank data, so linking had to stay optional and explain itself before asking.

Trade-off

Linking adds steps to onboarding. I kept it skippable and put every reason on one screen.

Outcome

In testing, 4 of 5 people set up their first budget without help.

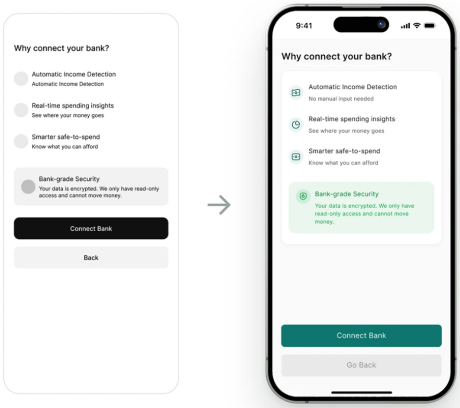
Iteration

11 / 15

Structure first,

polish second.

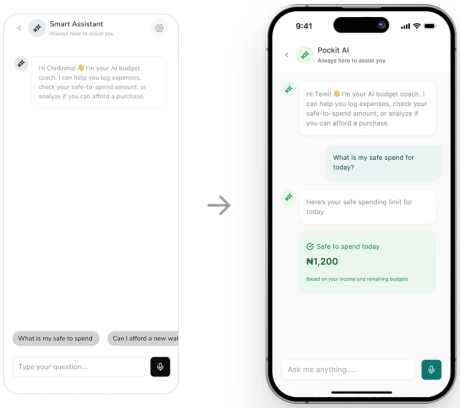
Low-fidelity wireframes settled the layout and the flow. Visual design came only once the structure held up in review.



Wireframe → Final

Why connect your bank

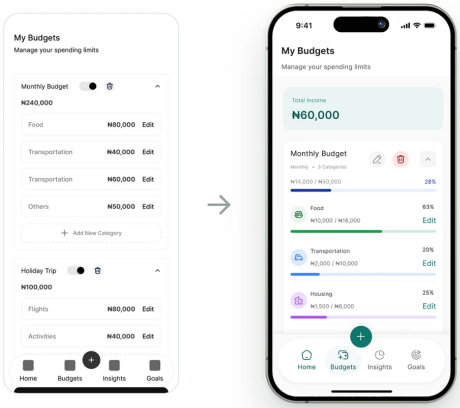
Problem: the security promise was a grey footnote, so linking felt risky. Fix: it became a soft green card above the button, and Connect Bank is the only main action.



Wireframe → Final

AI coach

Problem: answers came back as long paragraphs. Fix: every answer ends in a card with one clear number, like Temi's ₦1,200 safe spend.



Wireframe → Final

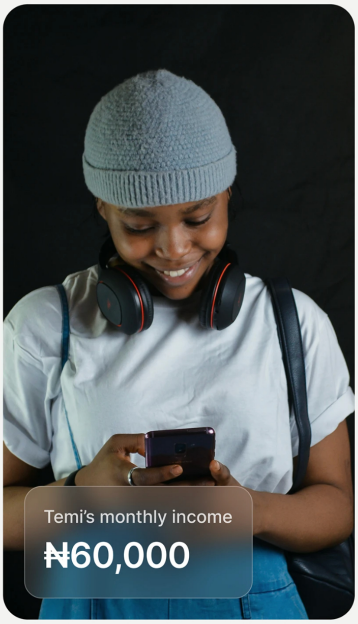
My budgets

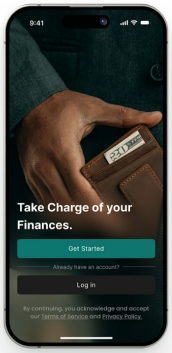
Problem: every category looked the same, so overspending was hard to spot. Fix: each one got a colour, an icon and a progress bar, with no red alarms.

Final design
Onboarding
12 / 15

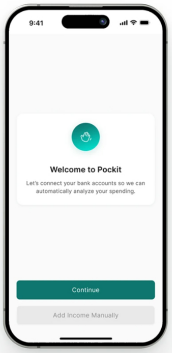
A calm start
to your money.

Sign up in a minute, add income, and link a bank only if you want to. Pockit then drafts a first budget to confirm.

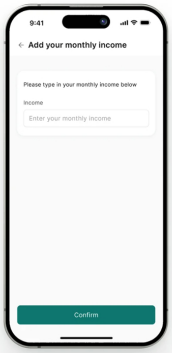




Get started



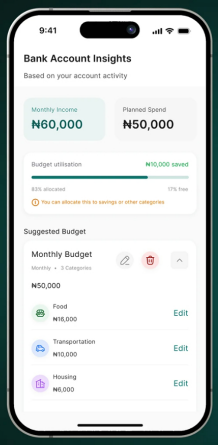
Choose a path

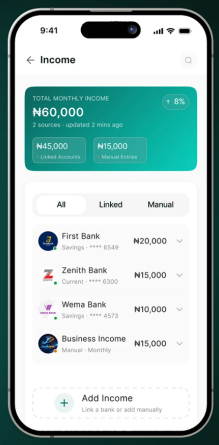


Add income

Your first budget, drafted for you.

After linking, Pockit reads recent activity and suggests a monthly budget by category. Temi edits or confirms it in one step.





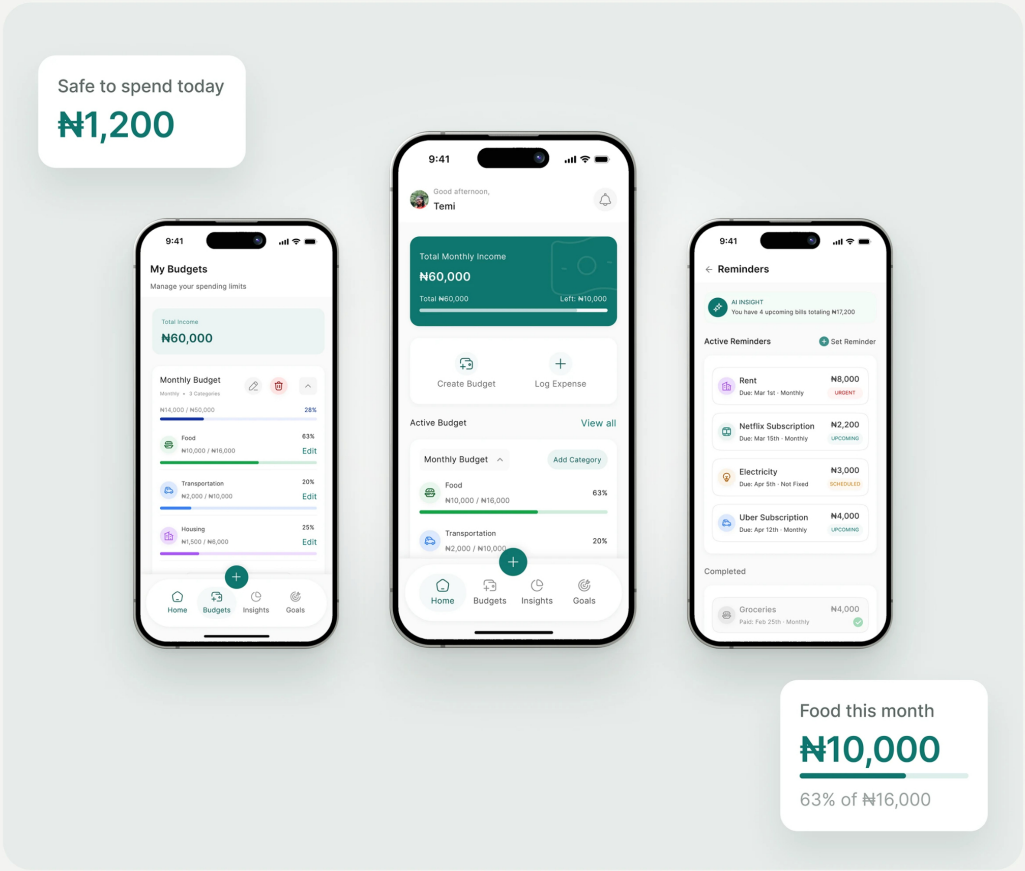
₦50,000 planned · ₦10,000 saved

Final design
Home and budgets
13 / 15

Every naira
in view.

Home answers one question first: how much can Temi safely spend today? Budgets and reminders sit one tap

away.



Budgets

Category limits with calm progress bars. Edit any limit in place.

Home

Income, active budgets, safe to spend and one weekly insight.

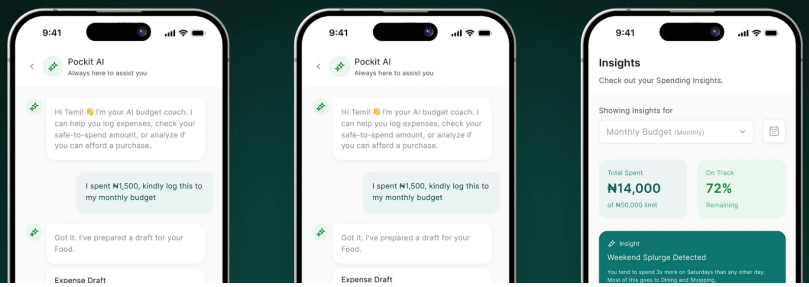
Reminders

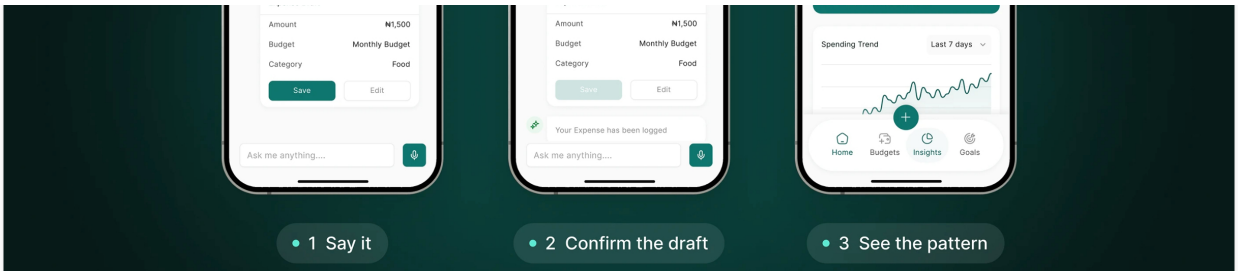
Bills and subscriptions, with a nudge before each one is due.

Final design
AI coach and insights
14 / 15

A coach in your pocket.

Log an expense by saying it. Ask what you can afford. Get weekly insights in plain words, each with a next step.





1 Say it · 2 Confirm the draft · 3 See the pattern

Voice logging

Speak naturally. The coach drafts the expense with amount, budget and category.

One-tap confirm

Nothing is saved until Temi confirms, so a misheard number never sneaks in.

Plain-language insights

Patterns come with a reason and a suggestion, never a red warning.

Testing and outcome

15 / 15

Designed to make money feel human.

I tested the prototype in 5 moderated sessions with students and young earners. These were the core tasks.

4 of 5

Set up a first budget

completed without help

4 of 5

Find today's safe spend

completed without help

5 of 5

Log an expense by voice

completed without help

Two paths to a first budget

By hand — 4 steps

Get started · Create account · Choose a path · Add income

With a bank — 9 steps

Get started · Create account · Choose a path · Why connect · Select bank · Account details · Connect securely · Analysing · Confirm budget

What I learned

Guidance beats data

People did not need more charts. They needed one clear answer at the moment of spending.

Tone is a feature

Swapping red warnings for calm words changed how the whole product felt.

Next, I would test

Whether a weekly money check-in keeps people coming back after the first month.
